

Angeville variables

Pop. per crime against persons

help("Guerry")

Figure 1 displays a 5x5 grid of heatmaps illustrating the relationship between various variables and the probability of a crime. The variables are: Infants, Suicides, Crime_prop, Crime_pers, and Literacy. The grid shows a diagonal pattern of blue and red shaded cells, indicating the direction of the relationship. To the right of the grid, five line plots show the relationship between each variable and the probability of a crime, with a red line representing the relationship.

Figure 1 displays a 5x5 grid of heatmaps illustrating the relationship between various variables and the probability of a crime. The variables are: Infants, Suicides, Crime_prop, Crime_pers, and Literacy. The grid shows a diagonal pattern of blue and red shaded cells, indicating positive and negative relationships respectively. To the right of the grid, five line plots illustrate the relationship for each variable, showing a red line on a black oval background.
